

cattledata

Herd Management System

by

farmdata
MANAGEMENT SYSTEMS

Cattledata is designed to ease the task of recording events that happen in your Cattle enterprise. It will produce the information you need for your records.

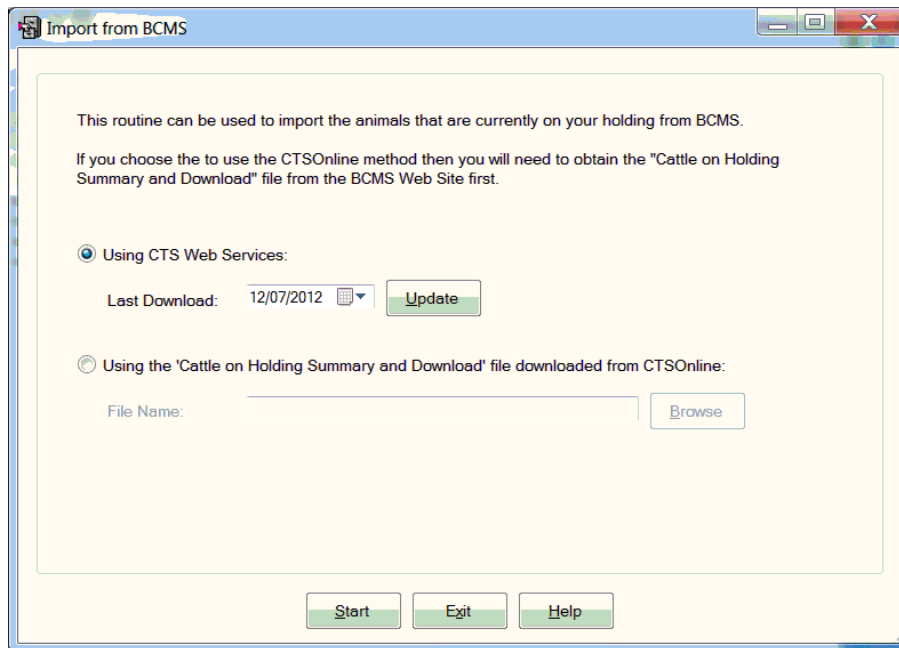

It will also link to selected external recording systems such as EID readers, weigh-heads and hand held recording devices.

Getting Started

Setting up and getting started could not be easier.

Cattledata comes with the facility to download your cattle from BCMS. You can be up and running in minutes.

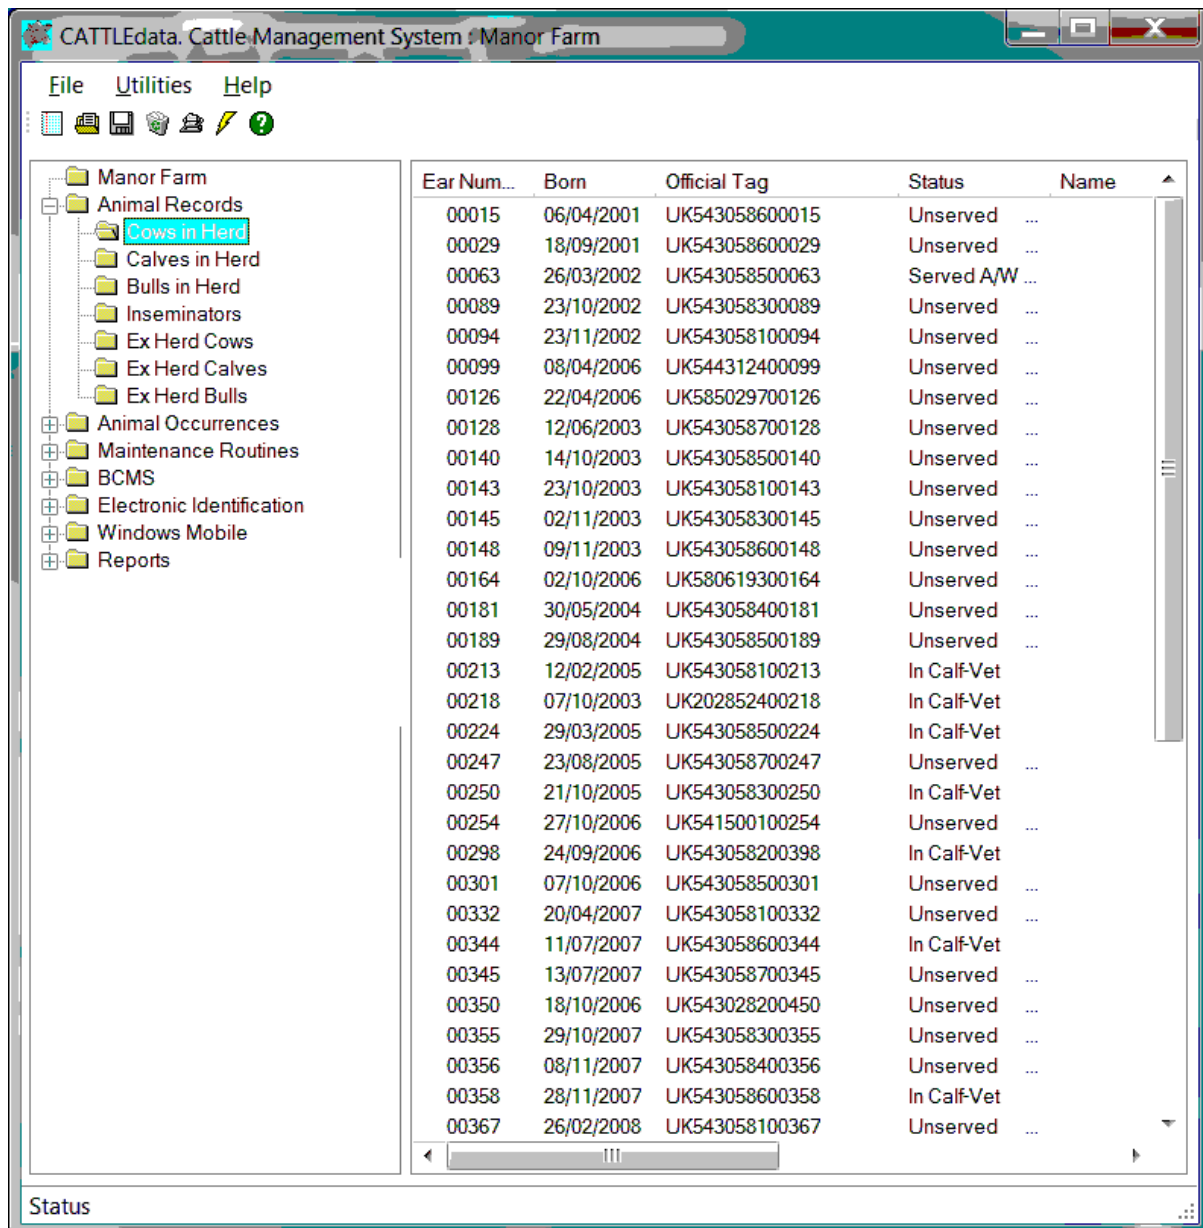

Two options are available.

- 1 Use BCMS Webservice. Communicates direct with BCMS Servers. You will need to get a User ID and Password from BCMS for this. It is however the best form of communication for passport application and movement recording.
- 2 Use a file generated on and downloaded from the CTS website.

Both of these options are described in the Cattledata Quickstart Guide.

The records it keeps

Individual Animals

Buttons at the bottom: Save, New, Delete, Find, Print, Next, Previous, Exit, Help.

Individual animal records for Cows, Calves and Bulls - both live and dead.

Easy to read records may maintained on each animal.

An individual animal's record can be as simple as its management tag, official tag, sex, breed, date of birth and movements.

It can be extended to include parentage, purchase price and life records of health, services, pd's, calving and weighing.

Scottish Beef Calf Scheme
(Scottish Version Only)

Eligibility and reports are available. Files for import into SG Rural Payments Online are created.

Health Records

A Life record of all treatments can be kept.

Includes date, reason, drug, dosage, batch no., expiry, withdrawal periods, who did it and any comment.

Bull Performance can also be monitored through the service / calving records

This gives a complete picture of any animal's performance.

Occurrences

Animal records are generally updated by entering occurrences.

Occurrences can be entered directly into the system by typing the detail in the appropriate section.

Animals					
Type:	Group	Location:	Manor Farm	Select	
Ear N	Group	Birth	Sex	Breed	Official Tag
00015	Reader	4/01	Female	SMX	UK543058600015
00029		18/09/01	Female	SMX	UK543058600029
00063		26/03/02	Female	SMX	UK543058500063

They can also, in many cases, be entered from data recorded on EID tag readers.

In the occurrence Type gives the following options.

All - Select from all the animals in the records.

Group - Select from the animals in a specific location within the herd.

Reader - Select from the animal numbers downloaded from reader. In location you may also select from a group recorded on the reader.

Examples of some occurrences.

The Calving window is divided into several sections. At the top, there are dropdown menus for 'Type' (set to 'All') and 'Location' (set to 'All'). Below these is a table for selecting a dam:

Ear Number	Born	Breed	Official Tag
00063	26/03/02	SMX	UK543058500063
00213	12/02/08	SMX	UK543058100213
00218	07/10/03	SM	UK202852400218
00224	29/03/05	SMX	UK543058500224

Below the dam table, there are fields for 'Date' (16/11/2012), 'Sire' (00496 UK202852200496), and 'Calving Score' (1 Normal). To the right of these fields are 'Add:' buttons. Below this is a 'Calves' section with a 'Total' box set to 1, and counters for 'Males' (1), 'Females' (0), 'Bulls' (0), and 'Stillborns' (0). At the bottom is a table for the calf:

Ear Number	Sex	Colour	Official Tag	Stillborn	Name	Weight
0587	Male	Brown	UK543058400587	<input type="checkbox"/>		42

At the very bottom are buttons: Save, Find, Next, Previous, Print, Remove, Refresh, Exit, and Help.

Calving

This is entered by selecting the dam from the list.

Enter the date of calving. The sire will be selected from the service record of the dam or, if incorrect, can be selected from the list of sires. Calving Score can be selected.

The number of calves is entered in the Total box and the next available tag numbers are displayed. These can be changed if necessary. Sex of calves should also be selected. Name and birth Weight may also be entered.

The BCMS Registrations window has a 'Limits' section at the top with 'Start Date' (03/11/2012) and 'End Date' (16/11/2012) dropdowns. Below this is a tabbed interface with 'Animals' and 'Errors' tabs. The 'Animals' tab shows a summary: 'Selected: 2', 'Available: 0', 'Total: 2'. Below this is a table:

Ear Number	Born	Sex	Breed	Official Tag	Done	Late
00586	08/11/2012	Male	SMX	UK543058300586	02/0	
00587	16/11/2012	Male	SMX	UK543058400587	02/0	

At the bottom are buttons: Send, Test, Print, Select, Refresh, Exit, and Help.

BCMS Registrations

After calvings have been entered passport applications can be done through the BCMS section.

Set the date range for the births you wish to register. Select the calves and click send.

The BCMS Submissions window shows a 'Type' dropdown set to 'All'. Below is a table with submission records:

File Name	Date	Type	Ref Number	Status	Comment
DEATH0002.XML	16/05/2011	Deaths	1715360	Accepted

Purchases

This can be the biggest task if substantial numbers are purchased.

Each animal has to have its details accurately entered.

Using a barcode scanner eliminates error and speeds the entry.

Enter the general detail in the top section.

Place the cursor in the Scan ID box.

Read the Barcodes on the bottom of the passport.

Birth date, Sex, Breed and tag numbers are filled in for each animal.

When all the animals in the batch are entered click save.

Group Recording

Whilst occurrences can be recorded against individual animals group recording can speed up the process. Typically health treatments can be done on a group basis.

Enter the detail in the top section.

In the animals select Group and Location. If all the animals were treated click Select. Any untreated can be clicked off. Click Save and all selected animals have the treatment applied.

EID Module

A Selection of EID readers can be used to record and transfer data. Those shown below are a few of those we have available.

“Stick” Readers are used to simply record the numbers from animals. These lists can be downloaded back to Cattledata and used in occurrences such as purchases and sales.

Allflex RS420

Agrident AWR100 Reader

Data-loggers are more sophisticated devices which can be pre-loaded with animal data and occurrences. Weighings, health treatments, services, scannings and lambings are a few examples of what can be recorded. These actions can then be transferred back to the program on your PC.

Agrident APR500

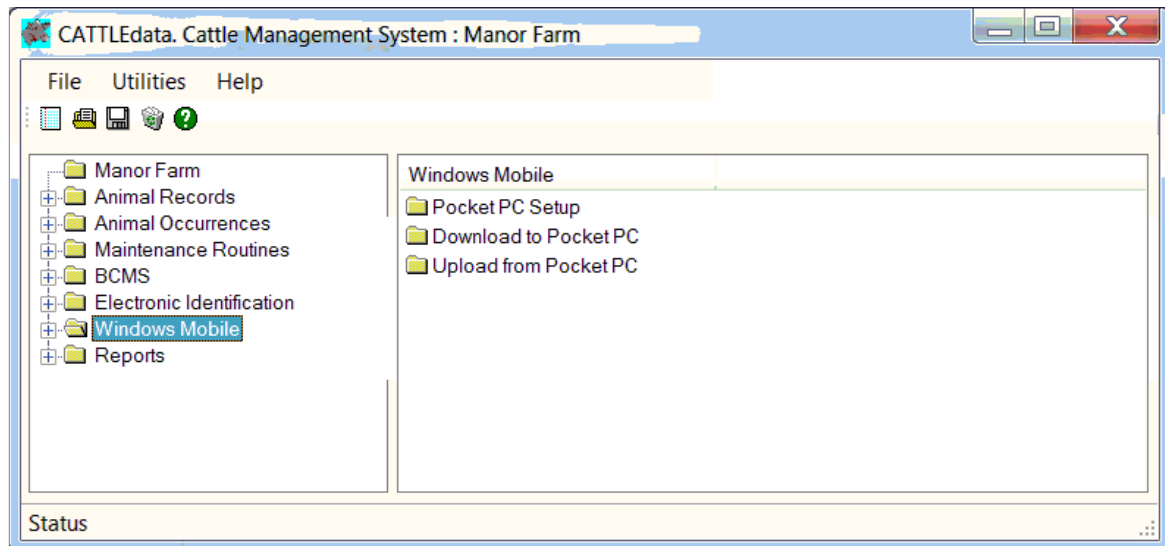

Barcode Scanner

Barcode Scanner can be used for quick accurate entry of Purchases from passport barcode. Sales animals can also be selected from passports.

Windows Mobile Module

The Windows Mobile Module lets you load a version of the program onto hand held touch screen devices running the Windows CE operating system.

This allows you to look up live animal records, record occurrences and synchronise these back to the master program on your PC.

Using a Psion Workabout Pro with the Agrident AIR200 EID reader fitted gives the ultimate flexibility

This adds the EID option to the Windows Mobile Module.
