The Information Required Before You Start

Classifications of Animals

Two classifications of animals are catered for by the system.

- 1 **Flock** records: These are animals do not need to be individually recorded. These may be slaughter lambs or, where individual animal records are not required, the breeding flock.
- 2 **Animal** records: Those which are individually numbered and recorded.

An Animal should not be entered in both of the above sections. This will lead to double counting.

It is worth taking some time to think through grouping of animals on the farm before setting up the system. This will affect ease of operation later, so that health treatments, movements and services can be entered for a group of animals, rather than individually.

It may be that for smaller flocks, one group and locations for all animals may work perfectly well. You can start this way and add more later as you gain experience of the system.

If there are obvious groups such Commercial and Pedigree sheep or distinct flocks within the business this may be the way to start. Internal Locations such as Hirsels may also be an option, Management Groups may be used to split in other ways.

You may even want each field and shed detailed as separate management groups, in order to trace exactly where an animal is currently located or has been previously located.

Remember, however, that an animal can only be in one location and management group at a time.

Loading the software

The system has to be loaded onto a computer running Windows XP or later versions.

Insert the CD and the system should automatically begin installation.

If not, select **Start** and **Run** from the Windows Desktop. In the **Command Line** type **d:\Setup** (where d is the drive letter of the CD-ROM) and click **OK**. Initialisation files will be copied.

Select Install Products and Updates

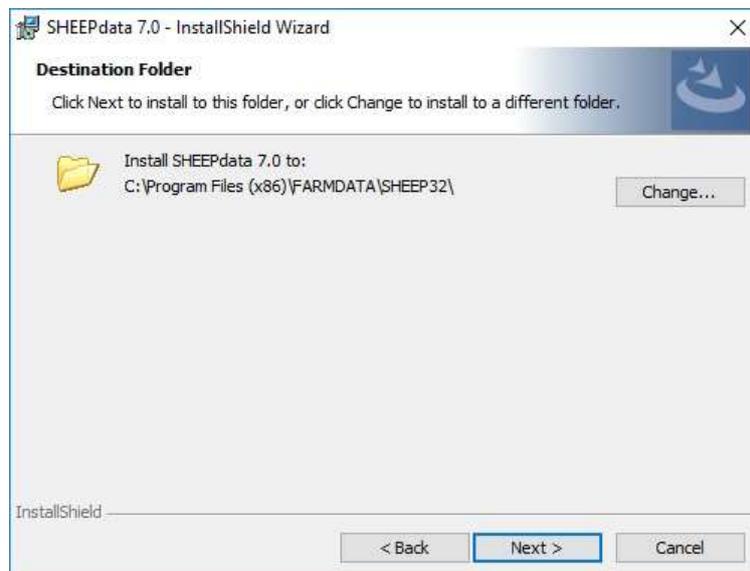

Select Sheepdata

Type in the Activation Key provided by Farmdata. If you are installing a demonstration version leave this blank. The program will run for 60 without an activation key.

Product	Key Required	Activation Key
SHEEPdata	Optional	

Follow the InstallShield wizard through. The program will now be installed. On the way through you will be asked to select a location for the installation. The default is provided, you may change it if necessary.

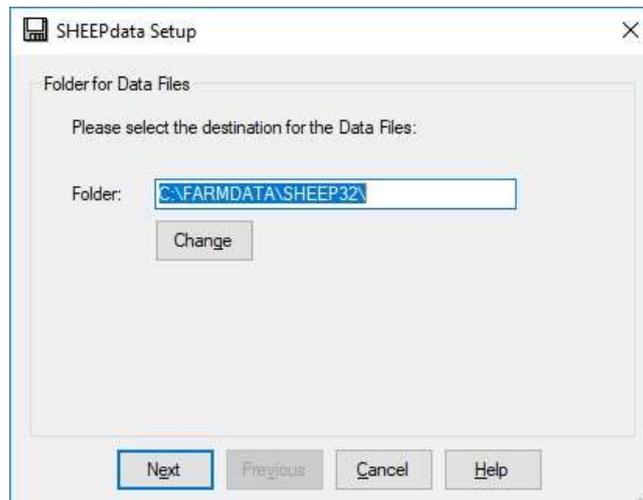

You should now have a Sheepdata Icon on your desktop.

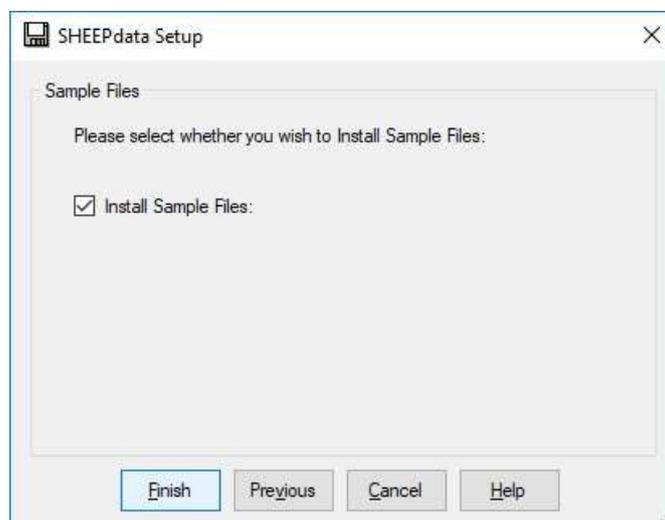

Starting the System

Once you have the system loaded onto the computer you can go ahead and start to use it.

Use the Sheepdata Icon on the desktop or Go to **Start, Programs, Farmdata and Sheepdata**. You will then get a screen showing you which directory the data files will be loaded into. C:\FARMDATA\SHEEP32\ is the suggested directory. If this is not acceptable, click **Change** and select your preferred directory.

Click OK proceed. You will be asked if you wish to install sample files. This is example data which can be installed for demonstration purposes. It will give you an idea of how the system operates without having to enter any data of your own. This data can be removed at a later date if you wish.

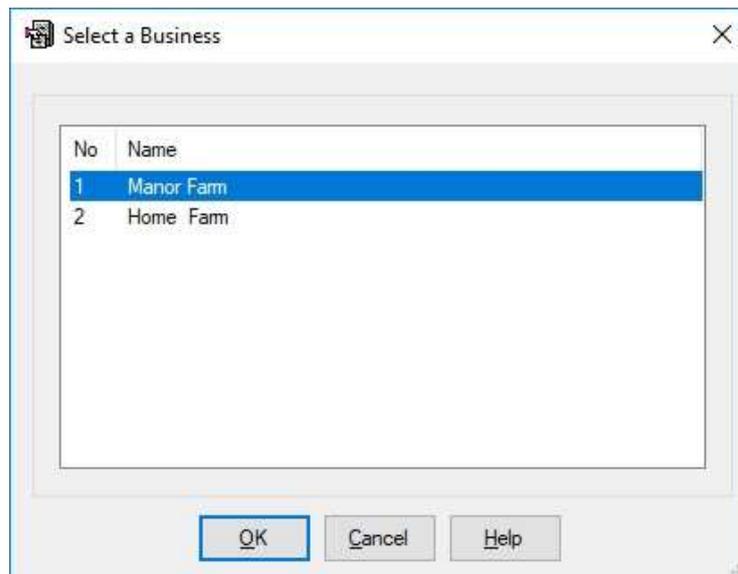

If you do not install sample files you will be asked if you wish to create a new business. If you have installed sample files you may later wish to create a new business for your own data. In the sample business go to File and New Business.

If you install sample data you will then go into the program. If you don't you will go into the routine to set up a business.

New Businesses

If you have separate Flocks which you wish to keep as individual businesses on the system you have to click on **File** and **New Business**. This will take you back to the initial start-up screen. You then follow the same routine for each new business.

Next time you start the program you will be given the business option screen to pick from as shown below. If you wish to swap between businesses whilst working in the program, click **File** and **Change Business**. Alternatively click the Open folder icon at the top of the screen.

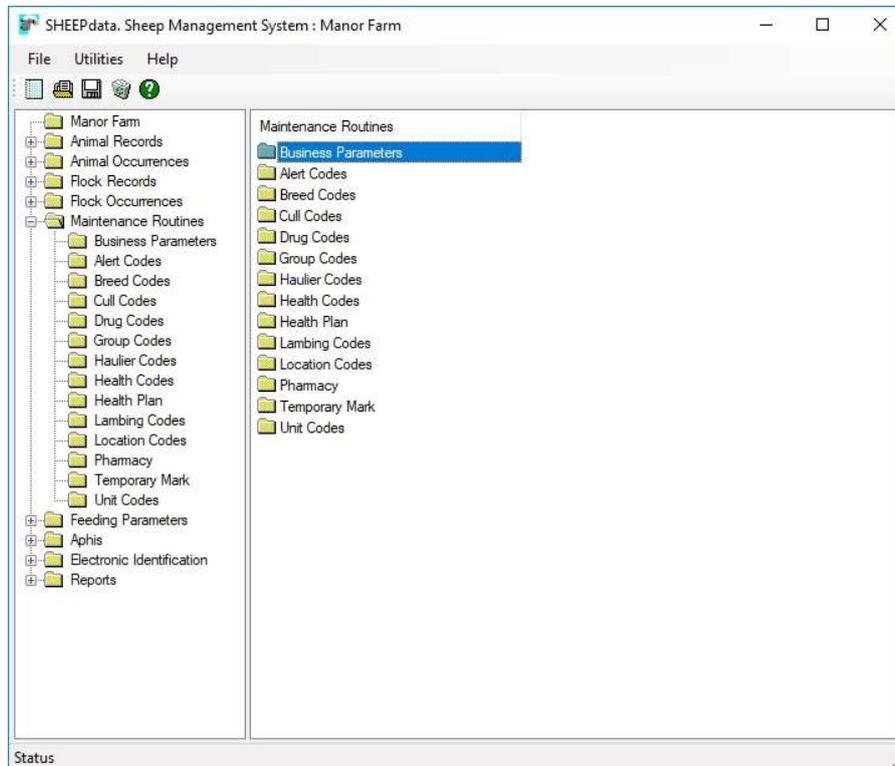

Use the main manual for further explanation when required.

Setting up the System Structure

The first sections that have to be set up are all in the Maintenance Routines Option. Double click this Icon to open. All the options are described in Chapter 1 of the main manual.

Business parameters were set in the start-up screen but can be edited at any time.

The sections that are initially important are Breeds, Locations, Management Groups and Lambing codes, which can be found in Code Lists.

Many of the sections below can be updated during the entry of data. The Add Button at the end of each drop-down list lets you add codes as you go along. It is however advisable to set up your basic list before you start creating animal records.

Breed codes has a list setup on delivery. This should be checked to see if any which you may need are not listed. The list should include all the cross breeds you will need. You may delete those you do not require. Where breeds are not important, for example where several cross breeds are in the flock it may be easiest to have a single Cross-Breed code set up.

Locations. At least one Internal Location must be entered. Some careful thought should be given to location before stating. Internal Locations are the groups in which the animals are kept on the farm. You may have one global group or many separate groups for fields, pens etc. Keep it simple to begin with, you can always add more if they are required later.

External Locations are where you buy and sell animals. Some of your sheep may be old but remember to put in their purchased locations as well to get their records correct. Other external locations you may require are summer grazings or even Show locations if movements have to be recorded to and from them.

Management Groups If this is enabled in the Business Parameters, Miscellaneous section then these can be set up as required.

Lambing codes has a list setup on delivery as shown below. It may not be as you wish and can be edited.

1	Normal
2	Assisted
3	Vet Assisted
4	Caesarean
5	Prolapse

Health, Units and Drugs Lists may be created before Health treatments are entered but can be created as you go.

Cull codes may be setup before you sell or cull any animals but can be entered as you go.

Business Parameters should be set us as required.

Once you have the basic structure in Maintenance routines you can then start to enter animals into the system.

Lists of the codes and animals can then be taken from the Reporting options.

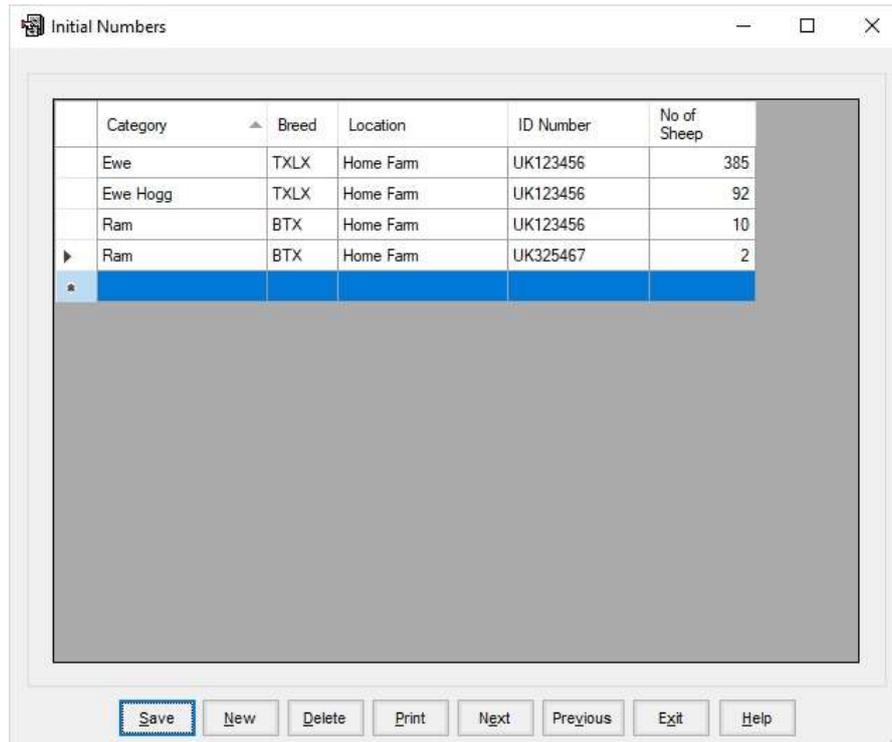

Entering Animals

You have to pick a point in time to start the System. You can then enter all the animals in the business at that time and take the occurrences forward from there.

Flock Entry

Animals which are not individually numbered and recorded are entered in **Flock Records** and **Initial Numbers**.

The total number within each Category, Breed, Location and ID should be entered.

The screenshot shows a software window titled "Initial Numbers" with a table containing the following data:

Category	Breed	Location	ID Number	No of Sheep
Ewe	TXLX	Home Farm	UK123456	385
Ewe Hogg	TXLX	Home Farm	UK123456	92
Ram	BTX	Home Farm	UK123456	10
Ram	BTX	Home Farm	UK325467	2

Below the table, there is a row of buttons: Save, New, Delete, Print, Next, Previous, Exit, and Help. The "Save" button is highlighted with a blue border.

Flock Occurrences can then be used to make entries relevant to these animals from then on.

Individually Numbered Animals

These can be created on the system in either of three ways.

1. In **Animal Occurrences** (Ewe, Lamb or Ram sections) through the **Purchase Routines**.
2. Directly into **Animal Records** by clicking the **New** Button. Minimum required is Management Number, Approx. Date of Birth, Breed, Official Number and in the movement page, the On movement.
3. Enter the animals in the Flock section under initial number and use the Individual Tagging option in flock occurrences to transfer them into the Animal section.

Ram Entry

Rams should be entered first. They will be needed as sires when entering ewes and lambs. (Remember to enter rams which may have been sold but are sires of animals still on the farm). Rams should be entered through **Animal Occurrences - Ram - Purchases** as shown below. Alternatively, they can be entered through **Animal Records - Rams in Flock Sold** or dead rams can go into the **Animal Records - Ex-Flock Rams** Section in the same way.

Save Select Delete Refresh Exit Help

If purchase dates, purchase locations, dates of birth, etc. are known these can be entered accurately one ram at a time.

Alternatively, animals can be entered as a batch with estimated dates.

Ewe/Gimmer Entry

Ewes/Gimmers in the should be entered in the **Animal Occurrence – Ewes/Gimmers - Purchases** section. This routine can also create a record for the last lambs born to the ewe, by entering details of the last lambing. You can alternatively use the **Animal Records – Ewes/Gimmers in Flock** section. Click **New** to get an empty record.

Purchase Example

The screenshot shows the 'Purchases' window with the following details:

- Date: 01/03/2017
- To: Home Fam
- Sex: Female
- Hauler: (Please Select)
- Born: 2015
- Vehicle No: (empty)
- Breed: Crossbreed
- Weight (Total): 0.00
- Invoice No: (empty)
- From: (Please Select)
- Price (Total): 0.00
- Comment: (empty)

Animals summary: Ewes: 2, Lambs: 3, Total: 5

*					<input type="checkbox"/>				

Buttons at the bottom: Save, Select, Delete, Refresh, Exit, Help

The above example has two ewes with their lambs born this year. This will create the ewe and the lamb records.

If purchase dates, purchase locations, dates of birth, etc. are known these can be entered accurately one ewe at a time.

Alternatively, animals can be entered as a batch with estimated dates. Each ewe should be entered followed by her lambs.

Lamb/Ewe Hog Entry

Any Lambs not created through ewe occurrences/purchases/lambings can be created either by entry as **New** in **Lamb or Ewe Hog Records** or **Purchases** in **Lamb or Ewe Hog Occurrences**. Either routine can be used to create the records.

New Record

The screenshot shows the 'Lambs in Flock' software window with the 'New Record' form. The 'Movements' tab is selected. The form contains the following fields and values:

- Ear Number: 02967
- Date of Birth: 01/03/2017
- Sex: Female
- Breed: Crossbreed
- Official Tag: UK059100102967
- Electronic Tag: (empty)
- Name: (empty)
- Comment: (empty)
- Alert (if applicable): (Please Select)
- Status: Unserved
- Weaned: 01/01/1980

Buttons at the bottom: Save, New, Delete, Find, Print, Next, Previous, Exit, Help.

Fill in the detail as appropriate. Select the movement tab to enter details of movements on. Other tabs can be selected if required for example tags to enter Dam and Sire details.

The screenshot shows the 'Lambs in Flock' software window with the 'Movements' tab selected. The form contains the following fields and values:

- Ear Number: 02967
- Purchase Price: 0.00
- Invoice Number: (empty)
- Movements: Show:

	Date	Moved From	Moved To	Haulier
▶	01/03/2017		Home Fam	
*				

Buttons at the bottom: Save, New, Delete, Find, Print, Next, Previous, Exit, Help.

Click **Save** when finished. Click **New** to enter another lamb.

Purchase

Fill in the detail as appropriate for a batch of lambs and click **Save** when finished.

Save Select Delete Refresh Exit Help

Using an EID reader to read a batch of animals to import.

If you can read the animals tags with a reader and import it into the program you can then save a lot of time and mistakes. Please see the Farndata manual for your reader to see how to do this.

In the Purchase Routine of the type of animal:

Enter the details in the top section of the input screen as required.

The screenshot shows a software interface titled "Animals". At the top, there are two dropdown menus: "Type:" and "Include:". The "Type:" dropdown is open, showing options: "All", "Import", "Reader", and "ScotEID". The "Include:" dropdown is set to "All". Below these are several columns: "Ear", "Born", "Sex", and "Breed". A table of data is visible below the columns, with one row highlighted in blue. The row contains the following values: "0561", "ScotEID", "01/01/2016", "Female", and "TXLX".

Ear	Born	Sex	Breed
0561	01/01/2016	Female	TXLX

In the **Type** option select Reader. All the new tags from the reader import will be listed.

In the Include option you may select the Group from the reader you require to get just those animals.

The animals in the selected option will be listed and can be saved.

Using the Import option is another alternative to speed up entry.

This allows you to import a list of numbers from a third-party file, usually .csv or excel file.

Enter the details in the top section of the input screen as required.

Selecting Import from the Type dropdown will let you browse to the file of numbers and then let you set the file definition (see Sheepdata Manual for this). The numbers from the file will then appear in the list. And can be saved.

Individual Tagging.

An option is to take a complete read of the flock with an EID reader and upload it into the program. Preferably different classes of animals would be read into groups on the reader.

Put in the totals in the flock in the Flock Records – Initial Numbers as in the flock entry section above.

Go to Flock Occurrences and Individual Tagging.

Animals			Selected:	Available:	Total:
Type:	Batch	Include: All	0	0	0
Star	Reader	No of Sheep			
*					

Enter the details of the batch of sheep to be identified in the top section and then select Reader.

You should also select the group to include from the reader. All the tags read will be displayed in the list. Click Select to select all or click the include box of those to be created.

Click save and the animals will be created in the animal section.

Routine occurrences can now be entered through the appropriate Occurrence Routines.

One of the first routines might be to enter previous beef lamb premium claim details or service details for ewes if this information was not entered earlier.

Don't forget to do your Backups !!!
